

# JASMINE LEE

Berkeley, CA | [jas.lee@berkeley.edu](mailto:jas.lee@berkeley.edu) | [www.linkedin.com/in/jasmineeclee/](https://www.linkedin.com/in/jasmineeclee/) | <https://jasmineclee.vercel.app/>

## EDUCATION

### University of California, Berkeley

May 2026

*B.A. in Data Science, B.A. in Cognitive Science*

*GPA: 3.9*

Berkeley Certificate in *Design Innovation*

**Relevant Coursework:** Data Structures, Linear Algebra, Probability, Data Engineering, Deep Learning, Industrial and Commercial Data Systems, Cognitive Neuroscience, Human-AI Design Methods, Prototyping and Fabrication

## WORK EXPERIENCE

### Database Designer

Sept 2025 – Dec 2025

*Lawrence Berkeley National Laboratory*

*Berkeley, CA*

- Designed ER diagrams and normalized a relational database (1NF→BCNF) across **25+** tables for large-scale facilities data (i.e. sensors, maintenance logs, controllers).
- Wrote SQL pipelines and queries for failure detection, reliability tracking, and compliance monitoring.
- Structured complex operational data to support scalable asset management and facilities decision-making.

### Lead Design Director

Sept 2025 – Jun 2026

*Cal Hacks*

*Berkeley, CA*

- Designed branding and user-facing systems for Cal Hacks' **3,000+** participant flagship hackathon and **1,600+** participant AI Hackathon.
- Led a team of 3 designers and coordinated cross-functional teams to ensure a cohesive participant experience.
- Created visual assets and product-facing materials used across event promotion, participant communication, sponsor-facing experiences, and live programming.

### Web Design Lead

Aug 2024 – May 2026

*Cognitive Science Students Association*

*Berkeley, CA*

- Designed student-facing tools, including a course planner and specialization quiz, to support academic planning.
- Improved website usability and navigation through iterative redesign; managed AV, speaker operations, and technical support for a **200+** attendee conference.

## PROJECTS

### GonioMetrix | *Jacobs Institute for Design Innovation*

2026

- Designed a wearable smart goniometer for independent joint-angle measurement in at-home rehab, athletic training, and ergonomic assessment.
- Translated user research, AI-assisted concept mapping, and systems analysis into a prototype with **dual IMU sensing**, ESP32 processing, haptic motors, speaker feedback, and a desktop GUI.
- Implemented a real-time feedback loop that compares movement against target ROM ranges and cues users through non-visual haptic/audio feedback.

### Deep Learning Framework | *Python, NumPy, PyTorch, Autograd*

2026

- Built a mini deep learning framework from scratch with reverse-mode autograd, computation graphs, tensor operations, modular layers, optimizers, and data loading.
- Implemented core neural network components including Linear, ReLU, BatchNorm, LayerNorm, Dropout, residual blocks, SoftmaxLoss, SGD, and Adam.
- Trained MNIST classifiers using the custom framework and built PyTorch pipelines for Fashion-MNIST and CIFAR-10 with accuracy evaluation.

### Housing Project (Cook County Assessor) | *Python, Pandas, Jupyter Notebook*

2025

- Analyzed **1M+** records to model housing prices and evaluate algorithmic bias.
- Applied regression modeling, feature engineering, cross-validation, and data visualization to identify regional and demographic disparities.

## TECHNICAL SKILLS

**Technical:** Python, SQL, Java, Pandas, NumPy, scikit-learn, PyTorch, MongoDB, Git, GitHub

**Design:** Figma, Adobe Creative Suite (Photoshop, Illustrator, Lightroom), Autodesk Fusion

**Interests:** Neuropsychology, Wearable Health Systems, Human-AI Interaction, Photography, Archery
